New Zealand Mudsnail ALERT

New Zealand Mudsnails (NZMS) were introduced to North America's Snake and Madison Rivers in the 1980s. This small invasive quickly moved to Yellowstone National Park and is now found in many waters across the West, including several streams in California. People usually spread NZMS attached to waders and fishing gear.

Prevent the spread of New Zealand Mudsnails:

- Freeze waders six to eight hours. It is best to leave them in the freezer overnight to ensure complete mortality.
- Use a separate set of waders or sampling gear for infested streams.
- Dry gear in air temperature of 112°F for 24 hours. Or, place gear in 130°F water for five minutes. Mortality of snails varies by exposure to heat and humidity.
- Removing snails from waders and equipment by brushing or rinsing is encouraged but does not guarantee your equipment is 100% free of snails. Proper freezing or drying techniques are the only known practical and reliable methods to treat equipment.
- Brush coats of dogs after wading to remove snails.
- Many aquatic invasive species are spread by anglers and boaters. Live bait and packaging for live bait can spread other invaders. Invasive aquatic plants and animals hitchhike on boats, propellers, live wells, and fishing gear. Clean all boating equipment to prevent the introduction of non-native invasive species.

Why control New Zealand Mudsnails?

NZMS disrupt the food chain by consuming algae in the stream and competing with native bottom-dwelling invertebrates. A population crash of invertebrates (small aquatic organisms) can follow the introduction of NZMS, which reduces fish forage. With a decrease in food availability, fish populations may decline as well. Learn more about New Zealand Mudsnails at www2.montana.edu/nzms.

How to Identify a New Zealand Mudsnail

- New Zealand Mudsnails average $1\frac{1}{8}$ inch long, but young may be as small as a grain of sand. A plate covers the opening of the gray, brown or black cone-shaped shell with 5-6 whorls.
- They live in most types of waters, from silted river bottoms to clear mountain streams and brackish waters.
- Temperature tolerance 32-77°F (66°F optimum).
- Reproduce asexually—only takes **ONE**.
- Densities of over **750,000 per meter²** have been found in Yellowstone National Park waters.
- Adults can survive several days out of water on moist gear.

Public Participation in the Commission's Regulatory Process

The Fish and Game Commission is composed of up to five members appointed by the Governor and confirmed by the State Senate. In addition to formulating general policies for the conduct of the Department of Fish and Game, and regulating aspects of commercial fishing, the Commission sets hunting and sport fishing regulations including seasons, bag limits and methods and areas of take. At least once every three years, the Commission devotes its early August, October, November and December meetings to recommendations for changes in the sport fishing regulations. The public may make recommendations in writing at or before the early August meeting or give its proposals orally at this meeting. These proposals are discussed at the October and November meetings.

Only proposals received by the early August meeting are considered. The Commission *may* receive additional testimony at the December meeting prior to adoption of the new regulations. The Commission's meeting schedule, including dates and location are posted on the web site at www.dfg.ca.gov/fg_comm. Written comments can be directed to the Fish and Game Commission at 1416 Ninth Street, Room 1320, Sacramento, CA 95814, or by e-mail to fgc@dfg.ca.gov.

LICENSE INFORMATION

POSSESSION AND DISPLAY OF LICENSE

Section 700. (Title 14, California Code of Regulations).

(a) Display of Sport Fishing License: Every person, while engaged in taking any fish, amphibian or reptile, shall display their valid sport fishing license by attaching it to their outer clothing at or above the waistline so that it is plainly visible, except when diving as provided in Section 7145 of the Fish and Game Code. Persons diving from a boat or shore may have their license on the boat or within 500 yards of shore, respectively (see Fish and Game Code Section 7145).

*The law now provides for a minimum \$100 fine for fishing without a license.

Regulations provide that a person may purchase a hunting or sport fishing license, tags, or stamps for another person, as long as the application contains the licensee's true name and address. Regulations require that prior to using any license or license stamps, the licensee shall complete the application so that it contains the licensee's true name, residence address, date of birth, height, color of eyes and hair, weight, sex, and driver's license or California Identification Card number.

A license is required to take reptiles, except for rattlesnakes. Only a basic fishing license is required to take amphibians, reptiles (except rattlesnakes) or any fish or for fishing in the ocean north of Point Arguello, Santa Barbara County. An **Ocean Enhancement Stamp** is required for ocean fishing south of Point Arguello except when fishing under authority of a one or two-day sport fishing license.

A **Bay Delta Sport Fishing Enhancement Stamp** is required to fish in San Francisco and San Pablo bays and associated tidal waters, Carquinez Strait, the Delta, and the Sacramento-San Joaquin River system below the most downstream dam on major tributaries (see section 1.18). How to Release Fish

Follow these five points to release fish unharmed:

1. Land your fish as carefully and quickly as possible.
2. Try to avoid removing the fish from the water. Underwater unhooking and release is preferred.
3. Do not squeeze the fish, or touch its eyes or gills.
4. Remove only those hooks that you can see and remove easily, otherwise clip the line near the mouth on deep hooked fish.
5. Use artificial lures (no bait) to minimize deep hooking. Barbless hooks or hooks with flattened barbs make unhooking easier and less stressful on the fish.

Article 4. Supplemental Regulations

8.00 . Low-Flow Restrictions.

(a) Eel River, Mad River, Mattole River, Redwood Creek, Smith River and Van Duzen River. Stream closures: Special Low Flow Conditions.

From October 1 through January 31, any of the stream reaches listed in subsection (1) through (7) below shall be closed to all angling on Tuesday and Wednesday when the department determines that the flow on the previous Monday at any of the designated gauging stations is less than the minimum flows set forth in subsections (1) through (7); any of the stream reaches listed in subsections (1) through (7) below shall be closed to all angling on Thursday and Friday when the department determines that the flow on the previous Wednesday at any of the designated gauging stations is less than the minimum flows set forth in subsections (1) through (7); any of the stream reaches listed in subsections (1) through (7) below shall be closed to all angling from Saturday through Monday when the department determines that the flow on the previous Friday at any of the designated gauging stations is less than the minimum flows set forth in subsections (1) through (7). In addition, the department may reopen a stream at any time during a closed period if the minimum flow as specified in subsections (a)(1)-(7) of Section 8.00 is exceeded and the department is reasonably assured that it will remain above the minimum flow until the next scheduled Monday, Wednesday, or Friday flow determination. The department shall make information available to the public by a telephone recorded message updated, as necessary, no later than 1:00 p.m. each Monday, Wednesday, and Friday as to whether any stream will be open or closed to fishing. SALMON SPORT FISHING SPECIAL ALERT FOR CALIFORNIA IN-RIVER FISHERY

The California coast coho (silver) salmon population has been designated as a threatened species under the federal Endangered Species Act (ESA) found at 16 United States Code, Section 1531, et seq. It is now unlawful to fish for, capture, keep, or possess under any circumstances California coast coho salmon. Violation of the ESA may result in civil or criminal penalties.

The National Oceanic and Atmospheric Administration Fisheries has listed coho salmon (*Oncorhynchus kisutch*) in California as a threatened species under the federal ESA. Coho salmon in coastal watersheds (waters that ultimately flow into the Pacific Ocean) from the Oregon border to and including the San Lorenzo River, Santa Cruz County are now protected under the ESA.

It is unlawful under Federal law to take (includes but is not limited to fishing for, capturing, keeping or possessing) coho salmon from the waters of California without an appropriate permit or regulation under the ESA. To minimize impacts to coho salmon that are unintentionally hooked, every effort should be made to release all hooked coho with the least amount of handling and harm possible. Examples of decreasing harm are, but are not limited to, hook retrieval without removing fish from the water, avoiding contact with gills or holding fish by gill cover, netting of fish, and/or exhausting of fish.

Coho (silver) salmon, above left, have white gums around the teeth, while the inside of a Chinook (king) salmon's mouth is all dark. Drawing by Paul B. Johnson.

PUBLIC HEALTH ADVISORIES ON FISH CONSUMPTION

Fish are nutritious and good for you to eat. But some fish you catch may take in toxic chemicals from the water they live in and the food they eat. Some of these chemicals build up in the fish—and in you—over time. Although the chemical levels are usually low, it is a good idea to follow a few precautions in consuming fish, particularly if you eat fish often. The purpose of this section is to guide you to eat the fish you catch in ways that reduce your exposure to chemicals.

The information presented here is from the Office of Environmental Health Hazard Assessment (OEHHA). OEHHA provides specific consumption advice for fish taken in areas where high levels of chemicals have been found in fish. However, because contamination levels are unknown for many locations, OEHHA also provides general advice on how to reduce your exposure to chemicals in non-commercial fish—referred to as sport fish—that you, your family, or friends catch.

These advisories are not intended to

discourage you from eating fish. Fish are nutritious and an excellent source of protein, and are recommended as part of a healthy, balanced diet. As with many other kinds of food, however, it is prudent to consume fish in moderation. OEHHA provides this consumption advice to the public so that people can continue to eat fish without putting their health at risk.

OEHHA provides illustrated brochures giving general and specific advice on sport fish consumption, available on request in several different languages. For more information on advisories and the health effects of chemical contaminants in fish, and to stay current on updates, please check the OEHHA Web site at www.oehha.ca.gov (click on "Fish") or contact the Pesticide and Environmental Toxicology Section (PETS) of OEHHA in Sacramento (P.O. Box 4010, Sacramento, CA 95812-4010, Phone 916/327-7319 or FAX 916/327-7320) or Oakland (1515 Clay Street, 16th Floor, Oakland, CA 94612, Phone 510/622-3170 or FAX 510/622-3218).

General Advice

You can reduce your exposure to chemical contaminants in sport fish by following the recommendations below. Follow as many of them as you can to increase your health protection. This general advice is not meant to take the place of advisories for specific areas, which follow later in this booklet, but should be followed in addition to them. Sport fish in most water bodies in the state have not been evaluated for their safety for human consumption. This is why we strongly recommend following the general advice given below.

Fishing Practices

Chemical levels can vary from place to place. Your overall exposure to chemicals is likely to be lower if you eat fish from a variety of places rather than from one usual spot that might have high contamination levels.

Be aware that OEHHHA may issue new advisories or revise existing ones. Consult the Department of Fish and Game regulations booklet or check with OEHHHA on a regular basis to see if there are any changes that could affect you.

Consumption Guidelines

Fish Species: Some fish species have higher chemical levels than others in the same location. If possible, eat smaller amounts of several different types of fish rather than a large amount of one type that may be high in contaminants.

Fish Size: Smaller fish of a species will usually have lower chemical levels than larger fish in the same location because some of the chemicals may accumulate as the fish grows. It is advisable to eat smaller fish (of legal size).

Fish Preparation and Consumption

- Eat only the fillet portions. Do not eat the guts and liver because chemicals usually concentrate in those parts. Also, avoid frequent consumption of any reproductive parts such as eggs or roe.
- Many chemicals are stored in the fat. To reduce the levels of these chemicals, skin the fish when possible and trim any visible fat.
- Use a cooking method such as baking, broiling, grilling, or steaming that allows the

juices to drain away from the fish. The juices will contain chemicals in the fat and should be thrown away. Preparing and cooking fish in this way can remove 30 to 50 percent of the chemicals stored in fat. If you make stews or chowders, use fillet parts.

- Raw fish may be infested by parasites. Cook fish thoroughly to destroy the parasites. This also helps to reduce the level of many chemical contaminants.

Advice for Pregnant Women

Children and fetuses are more sensitive to the toxic effects of methylmercury, the form of mercury of health concern in fish. For this reason, OEHHHA's advisories that are based on mercury provide special advice for women of childbearing age and children. Women should follow this advice throughout their childbearing years.

The U.S. Food and Drug Administration (FDA) is responsible for commercial seafood safety. FDA has issued the following advice about the risks of mercury in fish to pregnant women and women of childbearing age who may become pregnant. FDA advises these women not to eat shark, swordfish, king mackerel, or tilefish. FDA also advises that it is prudent for nursing mothers and young children not to eat these fish as well.

The U.S. Environmental Protection Agency has also issued national advice to protect women who are pregnant or may become pregnant, nursing mothers, and young children against consuming excessive mercury in fish. They recommend that these individuals eat no more than one meal per week of non-commercial freshwater fish caught by family and friends.

National advice for women and children on mercury in fish is available from the U.S. Environmental Protection Agency at www.epa.gov/waterscience/fishadvice/advice.html and the U.S. Food and Drug Administration at www.cfsan.fda.gov/~dms/admehg.html

Adjusting Fish Meal Size for Body Weight

In the site-specific guidance that follows, OEHHHA gives consumption advice in terms of meals for a given period such as a meal a week. Unless otherwise specified, an eight-ounce meal size is the standard amount allowed for the "average" adult. The average adult weighs approximately 150 pounds (equivalent to 70 kg). Because you and your family members may weigh more or less than the average adult, you can use the table below as a general guide to adjust serving sizes to body weight.

How big is a meal?

If you weigh... Your meal should not exceed...

Site-specific Consumption Recommendations

The following guidelines apply to the specific advisories that follow:

- Eating sport fish in amounts slightly greater than what is recommended should not present a health hazard *if only done occasionally*, such as eating fish caught during an annual vacation.

- Nursing and pregnant women and children *may be more sensitive* to the harmful effects of some chemicals. Women of childbearing age and children should be particularly careful about following the advisories. OEHHA has expanded the advisories based on mercury to include all women of childbearing age and children age 17 years and younger.

- The limits that follow for each species and area assume that *no other contaminated fish are being eaten*. If you eat several different listed species from the same area, or the same species from several areas, your total consumption still should not exceed the recommended amount. One simple approach is to use the lowest recommended amount as a guideline to consumption. For example, if you eat a fish from the one-meal-per-month category, do not eat another fish from that or any other water body for one month.

- Just because the area where you like to fish is not included in the specific advisory areas that follow, it does not necessarily mean that it is free from chemical contamination. Sport fish in most parts of the state have not yet been evaluated for their safety for human consumption. Follow

the general advice given earlier to protect your health.

- The following advisories are for freshwater (and estuaries) only. OEHHA's advisories for marine waters can be found in the California Department of Fish and Game *Ocean Sport Fishing Regulations* at http://www.dfg.ca.gov/mrd/sportfishing_regs2004.html.

The specific advisories listed below are arranged generally from north to south:

Trinity River Watershed (Trinity County) Including Trinity Lake, Trinity River (above Trinity Lake), Coffee Creek, Carrville Pond, and the East Fork Trinity River and its tributaries

Interim Advisory from Trinity County Health Services and OEHHA*

Because of elevated levels of mercury, women of childbearing age and children aged 17 years and younger should limit monthly consumption to no more than 1 meal of bass, 2 meals of catfish, **or** 4 meals of other fish from the Trinity River watershed areas listed above.

Black Butte Reservoir (Glenn and Tehama Counties) With Provisional Guidelines for Stony Gorge and East Park Reservoirs

Because of elevated levels of mercury, females of childbearing age and children aged 17 and under should limit monthly consumption to no more than 1 meal of bass; 2 meals of channel catfish, carp or crappie; or 4 meals of other sport fish from the waters listed above.

Women beyond childbearing age and adult males should eat no more than 2 meals of bass; 4 meals of channel catfish, carp or crappie; or 12 meals of other sport fish monthly from the waters listed above.

Selected Water Bodies from the Northern Sierra Nevada Foothills (Nevada, Placer, and Yuba Counties)

Because of elevated levels of mercury, follow the advice provided in the tables located at www.oehha.ca.gov/fish/so_cal/nosierra.html.

Lake Herman (Solano County)

Because of elevated mercury levels, women of childbearing age and children aged 17 years and younger should not eat fish from Lake Herman. Women beyond their childbearing years and adult males should eat no more than two meals per month of largemouth bass.

San Pablo Reservoir (Contra Costa County)

Interim Advisory from Contra Costa Health Services and OEHHA*

Because of elevated levels of mercury and other chemicals, eat no more than one serving each month of largemouth bass caught in San Pablo Reservoir.

Some contaminants have also been found in channel catfish. Testing is continuing on them. Fishers and others may want to restrict consumption of channel catfish to one serving each month.

** A final state advisory is being developed. Follow this advice in the interim.*

San Francisco Bay and Delta Region

Because of elevated levels of mercury, PCBs, and other chemicals, the following interim advisory* has been issued.

- Women beyond their childbearing years and adult males should eat no more than two meals per month of San Francisco Bay sport fish,

including sturgeon and striped bass caught in the delta. Women beyond their childbearing years and adult males should not eat any striped bass over 35 inches.

- Women of childbearing age and children aged 17 years and younger should not eat more than one meal of fish per month. In addition, they should not eat any striped bass over 27 inches or any shark.

- This advisory does not apply to salmon, anchovies, herring, and smelt caught in the bay; other sport fish caught in the delta or ocean; or commercial fish.

- Richmond Harbor Channel area: In addition to the above advice, no one should eat any croakers, surfperches, bullheads, gobies or shellfish taken within the Richmond Harbor Channel area because of high levels of chemicals detected there.

** A final state advisory is being developed. Follow this advice in the interim.*

Guadalupe Reservoir, Calero Reservoir, Almaden Reservoir, Guadalupe River, Guadalupe Creek, Alamitos Creek, and the associated percolation ponds along the river and creeks (Santa Clara County)

Because of elevated mercury levels in fish, no one should consume any fish taken from these locations.

Grassland Area (Merced County)

Because of elevated selenium levels, no one should eat more than four ounces of fish from the Grassland area in any two-week period.

Lake Nacimiento (San Luis Obispo County)

Because of elevated mercury levels, no one should eat more than four meals per month of largemouth bass from Lake Nacimiento. Women of childbearing age and children aged 17 years and younger should not eat largemouth bass from the area.

Harbor Park Lake (Los Angeles County)

Because of elevated chlordane and DDT levels, no one should eat goldfish or carp from Harbor Park Lake.

Salton Sea (Imperial and Riverside Counties)

Because of elevated selenium levels, no one should eat more than four ounces of croaker, orangemouth corvina, sargo, and tilapia taken from the Salton Sea in any two-week period. An additional warning for the New River has been published and posted by the Imperial County Health Department for people to avoid physical contact with the waters of the New River and to avoid eating any fish of any variety taken from the river.
